## **DAYTON SPICE MILLS CO.,**

**Sole Manufacturers.**

**DAYTON, OHIO, U. S. A.**

**YELLOWSTONE LAKE** is a body of water varying in width from 3 to 10 miles and in length from 8 to 15 miles, situated in the south part of Yellowstone National Park Reservation. It is one of the sources of the "Father of Waters" and is situated scarcely a mile from what is known as the Continental divide, at which point falling water has an even chance to reach either the Pacific Ocean through the Columbia River, or the Gulf of Mexico through the Yellowstone, Missouri and Mississippi Rivers. The lake, now a paradise for fishermen, was evidently, in prehistoric times, the crater of a great volcano; the gurglings of which are still present in the shape of holes in the rocks even at the edge of the water of the lake, where forever boils the water over nature's own fires and where the fisherman may boil his fish as fast as he can catch them. The Lake is 7,788 feet above sea level and furnishes the wherewith for the numerous grand and beautiful waterfalls which have made Yellowstone River so attractive to the tourist. Yellowstone Park is not open for settlement but is ever to be kept as a National "Curiosity Shop," 56x65 miles in dimensions.
